**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, drawn to mutagenic oligonucleotides, classified in class 536, subclass 24.3.
  - II. Claims 6-14, drawn to methods of mutagenesis, classified in class 435, subclass 440.
  - III. Claims 15-19, drawn to methods of making mutagenic oligonucleotides, classified in class 536, subclass 25.3.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in Group I and in Group II are related as product and process of use.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product of Group I can be used for mutagenesis, for DNA sequencing, or for gene therapy.

3. Inventions in Group III and in Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product can be

Art Unit: 1637

made by incorporating the mutagen into the oligonucleotide after synthesis or by chemically coupling the mutagen to a nucleotide and then attaching the nucleotide to the oligonucleotide by polymerase addition or by chemically coupling the mutagen to a nucleotide and then attaching the nucleotide to the oligonucleotide by chemical coupling.

4. Inventions in Group II and in Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because the modes of operation, functions and effects of the method of mutagenesis of Group II differ from those of oligonucleotide synthesis of Group III since the first method results in a particular therapy while the third method synthesizes an oligonucleotide.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Robert Hodges on April 1, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1637

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
